Dear Hiring Manager,

I'm applying for the Vice President, Strategic Program Management Office role. I build program functions and run them close to the executive team. Today that's at SingleStore, where I'm Sr Director, Engineering and chief of staff to the CTO. Before that, I built Ripple's global implementation function.

Digit 5 reaches early-access customers in early 2027, and RoboFab is built to make up to 10,000 robots a year. Launch programs at Agility now have to repeat on schedule. I'd own the portfolio view for the COO, set the cadence every program runs on, step in early when a program drifts, and bring that view into strategic and annual operating planning. Some of what I've done:

- At Ripple, grew the implementation team from 3 project managers to 25, plus 75+ engineers and architects, and cut delivery time from eight months to eight weeks across 800+ implementations.
- At SingleStore, rescued a failing strategic partner integration through a cross-functional realignment. It brought in $30M+ in recurring ARR.

In my first months I'd set up gate reviews, milestone and risk tracking, schedule, cost and quality KPIs, and an executive program review the COO can make decisions from. I'd hire TPMs to own individual launches and keep sequencing and tradeoffs across the portfolio myself. I lead AI enablement at SingleStore, including Claude Code, and would use it to take the manual work out of program reporting.

I haven't led hardware or robotics launches, and I'd lean on your engineering, supply chain, manufacturing, and quality leaders for that depth. What I bring is the discipline that turns early deployments into repeatable delivery. I live in Pacifica, within reach of Fremont, and I hold an active PMP, an Executive MBA, and a BS in Electronic Engineering Technology.

I'd welcome a conversation about the role.

Best,

Casey Caster
