MongoDB
Re: Director, Chief of Staff, Office of the CIO (Req ID 3273594508)

Dear MongoDB Hiring Team,

What excites me most is helping a business do what it didn't think it could. That's what draws me to the Director, Chief of Staff role at MongoDB, and in particular the job of turning the IT portfolio into one transparent view that lets the CIO make investment calls on time and see them through.

At Ripple, I started with four project managers who couldn't keep up with customer demand. That team grew into a global organization, and the result I point to is that banks could go live on RippleNet in eight weeks instead of eight months, as the network grew past 200 members. Along the way we built programs and tools that met customer needs without continually adding headcount.

Today I lead Engineering Infrastructure & Internal Services at SingleStore, a cloud-native database company, as the CTO's chief of staff. I give people clear direction, build what the business needs, and change course when a better opportunity shows up. I'll retire a structure I built the day it stops paying for itself. I run capacity planning and delivery dashboards, manage the engineering budget with Finance, and cut internal cloud spend in half. I also led the governance program behind our GenAI adoption, and I use Claude Code in my own work.

My portfolio has sat on the engineering side of internal technology more than corporate IT's identity, security, and enterprise applications stack. I'd lean on your architects there, the same way I've always built around deep specialists.

The pattern holds at other scales. I led a $20M program across multiple sites and vendors, and I delivered more than $2M in cost efficiencies at a multinational software company.

I'd like to hear where you want to take MongoDB's IT organization and talk about how I can help you get there faster. Palo Alto's hybrid schedule works well from Pacifica.

Best,

Casey Caster
