Crusoe

Dear Crusoe Hiring Team,

What excites me most is helping a business do what it didn't think it could. That's what draws me to the Vice President, Information Technology role at Crusoe: giving a company that sources energy, builds AI factories, manufactures Crusoe Spark data centers, and runs Crusoe Cloud one set of enterprise systems that keeps pace with all of it.

At Ripple, I started with four project managers who couldn't keep up with customer demand. That team grew into a global organization, and the result I point to is that banks could go live on RippleNet in eight weeks instead of eight months, as the network grew past 200 members.

Today I lead Engineering Infrastructure & Internal Services at SingleStore with the same mindset. I give people clear direction, build what the business needs, and change course when a better opportunity shows up. We cut infrastructure bottlenecks 70% with an internal development platform, stood up internal GenAI platforms with Claude Code, and folded acquired teams into core systems after M&A. I manage the engineering budget with Finance and negotiate vendor contracts, down to LLM token pricing.

I'll be direct about ERP. At NetApp I managed SAP CRM product development for call center operations, saving more than $5M a year. SAP CRM is familiar ground, but my ERP exposure is indirect, and I haven't owned identity, access, or endpoint management. I'd hire and back Directors with that depth.

The pattern holds at other scales. I led a $20M program across multiple sites and vendors, and I delivered more than $2M in cost efficiencies at a multinational software company.

I'd like to hear where you want to take Crusoe and talk about how I can help you get there faster.

Best,

Casey Caster
