Ode with Anthropic

Dear Ode Hiring Team,

What excites me most is helping a business do what it didn't think it could. That's what draws me to the Head of Business Operations and Analytics role at Ode, and in particular the supply and demand problem at its center: Anthropic has said demand for Claude is outpacing any single delivery model, and matching the right people to that work sets Ode's pace.

At Ripple, I started with four project managers who couldn't keep up with customer demand. That team grew into a global organization, and the result I point to is that banks could go live on RippleNet in eight weeks instead of eight months, as the network grew past 200 members. Along the way we built programs and tools that met customer needs without continually adding headcount.

Today I lead Engineering Infrastructure & Internal Services at SingleStore with the same mindset. I give people clear direction, build what the business needs, and change course when a better opportunity shows up. I'll retire a structure I built the day it stops paying for itself. I run engineering capacity planning and delivery dashboards and built a COGS intelligence engine with Finance. I work in Claude Code myself and lead AI tooling across our stack.

On analytics, I build the operating models behind decisions, from cloud usage to COGS, in SQL, Looker, and spreadsheets, and bring in deeply technical people when a problem needs more depth.

The pattern holds at other scales. I led a $20M program across multiple sites and vendors, and delivered more than $2M in cost efficiencies at a multinational software company.

I'd like to hear where you want to take Ode and talk about how I can help you get there faster.

Best,

Casey Caster
