Databricks

Dear Databricks Hiring Team,

What excites me most is helping a business do what it didn't think it could. That's what draws me to the Director, Field Engineering, Emerging Enterprises & Startups role at Databricks, and in particular the startups building their core products on Databricks, which need a field team that grows with them from a first workload into an enterprise account.

At Ripple, I started with four project managers who couldn't keep up with customer demand. That team grew into a global organization, and the result I point to is that banks could go live on RippleNet in eight weeks instead of eight months, as the network grew past 200 members. Along the way we built programs and tools that met customer needs without continually adding headcount.

Today I lead Engineering Infrastructure & Internal Services at SingleStore with the same mindset. I give people clear direction, build what the business needs, and change course when a better opportunity shows up. I'll retire a structure I built the day it stops paying for itself. When a strategic partner program was falling apart, I stepped in and led it to successful delivery, and it now brings in more than $30M in recurring ARR.

The pattern holds at other scales. I led a $20M program across multiple sites and vendors, and I delivered more than $2M in cost efficiencies at a multinational software company. Earlier in my career, I drove hundreds of implementations and product upgrades for financial institutions worldwide.

I'd like to hear where you want to take Databricks and talk about how I can help you get there faster.

Best,

Casey Caster
