Oracle

Dear Oracle Hiring Team,

What excites me most is helping a business do what it didn't think it could. That's what draws me to the VP, Technical Programs and Business Operations role at Oracle, and in particular the chance to own the Rhythm of Business for Data Core and Storage and tie programs like Cost of Cloud to the engineering decisions behind them.

At Ripple, I started with four project managers who couldn't keep up with customer demand. That team grew into a global organization, and banks could go live on RippleNet in eight weeks instead of eight months. Along the way we built programs and tools that met customer needs without continually adding headcount.

Today I lead Engineering Infrastructure & Internal Services at SingleStore with the same mindset. I give people clear direction, build what the business needs, and change course when a better opportunity shows up. I'll retire a structure I built the day it stops paying for itself. As chief of staff to our CTO, I run engineering capacity planning and delivery dashboards and manage the engineering budget with Finance. We cut internal cloud spend in half, built a COGS intelligence engine, and increased engineering velocity 5x. When a strategic partner program was falling apart, I stepped in and led it to successful delivery, and it now brings in more than $30M in recurring ARR.

SingleStore is a cloud-native database company, and my six direct reports include a director, two managers, a TPM who runs QA and two principal architects. I lead deep technical people by design: I ask the hard questions on cost and delivery tradeoffs, and I own the outcome.

The pattern holds at other scales. I led a $20M program across multiple sites and vendors, and I delivered more than $2M in cost efficiencies at a multinational software company.

I'm based in the San Francisco Bay Area. I'd like to hear where you want to take Data Core and Storage and talk about how I can help you get there faster.

Best,

Casey Caster
