Hiring Manager
Capital One

Dear Hiring Manager,

I am interested in the Senior Director, Technical Program Management opportunity at Capital One. As an experienced software executive, I bring a broad background in technical program management, AI enablement, engineering operations, and delivery in regulated environments. What excites me about this role is the chance to lead AI platform programs and to help build a TPM practice from the ground up.

I currently lead Internal Services and Technical Program Management at SingleStore as chief of staff to the CTO. There I drove our internal GenAI adoption, including Claude Code, through a governance program and internal AI platforms, and increased engineering velocity 5x through an agile transformation.

Selected achievements from earlier in my career include:

- Grew Ripple's delivery team from 3 project managers to 25, plus 75+ engineers and architects, and delivered 800+ global implementations on the RippleNet payments network.
- Delivered a $20M+ digital transformation program at Wells Fargo with more than 300 testers.
- Mentored dozens of team members, three of whom went on to become CEOs.

Collaboration is central to how I lead. I am not a hands-on distributed systems engineer; I lead through deeply technical people. Two principal architects report to me, and I rely on their depth while owning the outcome.

At Capital One, I would align AI platform programs with business priorities, set clear direction across teams, raise technical risk early with senior leadership, and grow the TPM discipline.

I would welcome the opportunity to discuss how my experience and leadership approach align with your priorities for this role. Thank you for your consideration.

Best,

Casey Caster
