Dear Hiring Manager,

I am applying for the Vice President, Program Management Office role at Rapid7. As Sr Director, Engineering for Internal Services and Technical Program Management at SingleStore, I serve as chief of staff to the CTO, and I have spent more than 15 years building program management and delivery functions.

Rapid7 is going deeper in Detection and Response and Exposure Management and building an AI-first platform. Its PMO sets the delivery pace for that work, which is close to what I do today. At SingleStore and Ripple I have:

- Increased engineering velocity 5x through an agile transformation and accountability systems, and launched an internal development platform that cut infrastructure bottlenecks by 70%.
- Built a team of 25 project managers and 75+ indirect partners at Ripple and delivered 800+ global implementations.
- Rescued a failing strategic partner integration through a cross-functional realignment, unlocking $30M+ in recurring ARR.

Collaboration is central to how I lead. At SingleStore I built a COGS intelligence engine with Finance to tie growth trends to investment decisions, and at Ripple I set up the RippleNet Committee with C-suite executives of major banks. I turn roadmap and resource constraints into plain business terms.

At Rapid7, I would make the PMO the single source of truth for R&D delivery: build and lead a team of technical program managers and scrum masters embedded with engineering squads, tie product roadmaps to architecture dependencies, and use capacity planning and delivery dashboards to give engineering leadership early warning on risk. I have not worked in cybersecurity, but release pace, cross-team dependencies, and investment trade-offs are problems I have solved in cloud infrastructure and fintech.

I would welcome the chance to discuss how I can help Rapid7 ship faster and more predictably. Thank you for your consideration.

Best,

Casey Caster
