SoFi

Dear SoFi Hiring Team,

What excites me most is helping a business do what it didn't think it could. That's what draws me to the Sr Director, Head of Enterprise Applied AI role at SoFi (R0013730): adding a record 1.2 million members in a quarter makes enterprise-wide AI adoption an operating need for every team.

At Ripple, I started with four project managers who couldn't keep up with customer demand. That team grew into a global organization, and the result I point to is that banks could go live on RippleNet in eight weeks instead of eight months, as the network grew past 200 members.

Today I lead Engineering Infrastructure & Internal Services at SingleStore with the same mindset. I give people clear direction, build what the business needs, and change course when a better opportunity shows up. I'll retire a structure I built the day it stops paying for itself. I built our GenAI governance and operations program, launched internal AI platforms, and lead AI enablement across the development stack, including Claude Code. I also stepped in to lead a failing strategic partner program to delivery; it now brings in more than $30M in recurring ARR.

My principal architects and engineers hold the deepest architecture expertise; I point it at the right problems and get the business to adopt it. I'd lead your product managers and forward deployed engineers the same way.

The pattern holds at other scales. At Wells Fargo I led a $20M program across multiple sites and vendors, and I delivered more than $2M in cost efficiencies at a multinational software company.

I'd like to hear where you want to take AI at SoFi and talk about how I can help you get there faster.

Best,

Casey Caster
