October 20, 2026

Dear Hiring Manager,

I am applying for the Vice President, Strategic Program Management Office role at Agility Robotics. I build program management functions from the ground up and run them close to the executive team: today as Sr Director, Engineering at SingleStore and chief of staff to the CTO, and before that as the leader who built Ripple's global implementation function.

With Digit 5 on track for early-access customers in early 2027, RoboFab designed to produce up to 10,000 robots a year, and a public listing ahead, Agility is at the point where launch programs have to become repeatable. That is the work I want: owning the portfolio view for the COO, setting the cadence every program runs on, stepping in early when a program drifts, and bringing that view into strategic and annual operating planning. In comparable situations I have:

- Built Ripple's global implementation function from 3 project managers to 25, plus 75+ engineers and architects, and cut delivery time from eight months to eight weeks across 800+ implementations.
- Recovered a failing strategic partner integration at SingleStore through a cross-functional realignment, unlocking $30M+ in recurring ARR.
- Run engineering capacity planning and delivery dashboards and manage the engineering budget with Finance.

In the first months I would stand up the SPMO's operating rhythm: gate reviews, milestone and risk tracking, program KPIs for schedule, cost, quality, and scope, and an executive program review the COO and staff can make decisions from. I would hire and coach TPMs who own individual launches, while I own sequencing, resourcing, and tradeoffs across the portfolio. I lead tooling and AI enablement across SingleStore's development stack, including Claude Code, and would use the same tools to take manual work out of program reporting.

I have not led hardware or robotics product launches, and I would lean on your engineering, supply chain, manufacturing, and quality leaders for that depth. What I bring is the operating discipline that turns early deployments into repeatable delivery: at Ripple, I helped take a new payments network from its first 12 banks to more than 200 members. I live in Pacifica, within commuting distance of Fremont, and can work remotely or hybrid. I hold an active PMP, an Executive MBA, and a BS in Electronic Engineering Technology.

I would welcome the chance to discuss how I can help Agility launch programs predictably at scale.

Best,

Casey Caster
