Dear Hiring Manager,

I am applying for the Senior Director, Technical Program Management role (R1003100), based in San Jose or San Francisco. As Sr Director, Engineering for Internal Services and Technical Program Management at SingleStore, a cloud-native database company, I lead technical program management and AI enablement as chief of staff to the CTO.

Capital One builds proprietary AI on its modern tech stack, from a transformer-based recommender for real-time experiences to a generative AI tool that helps employees answer customer questions faster. Moving AI programs from concept to production across many teams, with governance built in, is the work I lead today:

- Drove SingleStore's internal GenAI adoption through a governance program and internal AI platforms, and lead AI enablement with Claude Code, Amazon Bedrock, and Google Vertex AI.
- Increased engineering velocity 5x through agile transformation and accountability systems, and run engineering capacity planning and delivery dashboards for engineering leadership.
- Rescued a failing strategic partner integration through a cross-functional realignment, unlocking $30M+ in recurring ARR.

Building a program management function from the ground up is work I have done before. At Ripple I grew the delivery team from three project managers to 25, plus 75+ engineers and architects, and delivered 800+ global implementations on the RippleNet payments network. Three people I mentored went on to become CEOs. That work, and a $20M+ transformation at Wells Fargo, taught me to deliver in highly regulated environments.

I lead through deeply technical people rather than as a hands-on distributed systems engineer. Two principal architects report to me, I know enough to ask the right questions, and I own the outcome. I led SingleStore's M&A technical due diligence, then integrated the acquired teams into core systems and workflows. I would bring that to your AI and ML platform programs, alongside an Executive MBA from Cornell and Queen's and an active PMP.

I would welcome the chance to discuss how I can help Capital One take its AI platforms from concept to production. Thank you for your consideration.

Best,

Casey Caster
